

Kids Academy

User test with a kindergarten student

Thomas Semundseth, 27 years old.

Thomas is a kindergarten student (fourth year) at Ostfold University College in Halden. In this usertest session, we made him test and try the app functionalities designed for kids aged from 4 to 6.

He also tried the Teacher interface of the app to make sure that it is simple to use in order to have the best user experience.

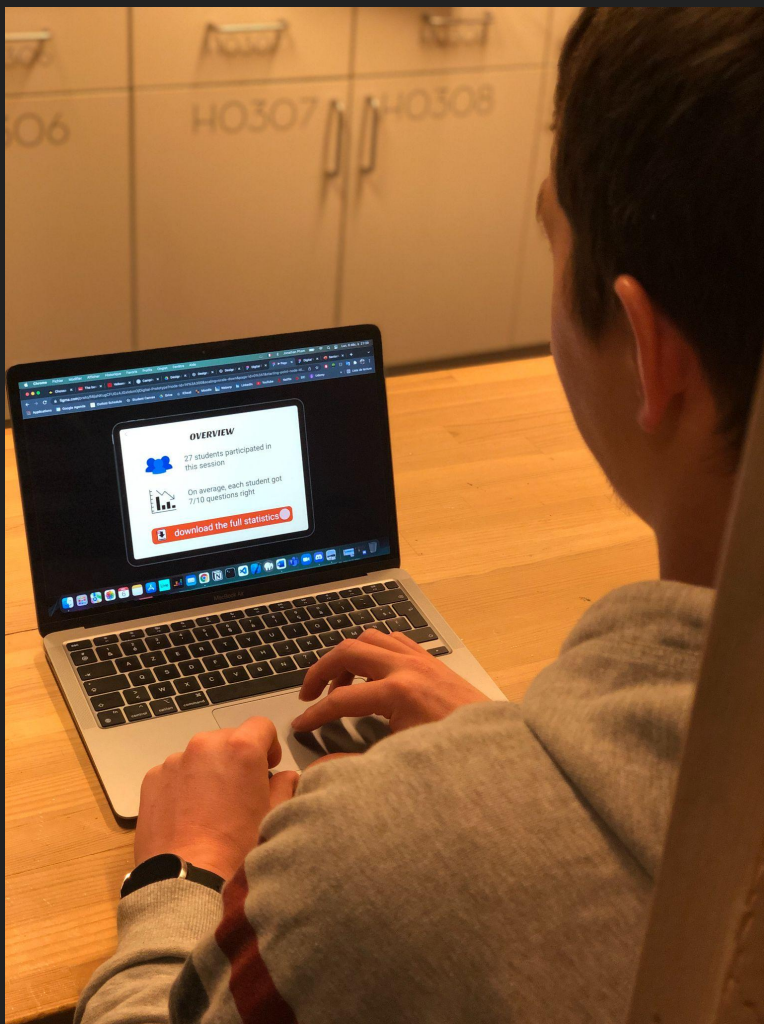

Finally, he gave us some feedbacks and improvement ideas for Kids Academy app.

“ I really like the home page and I think the app design is very attractive! ”

“ I like the different game categories, I think it's really adapted to kids skills and knowledge.”

“ I think it’s really useful to have a *Result page* to track the improvement of kids and to have a global idea of how successful the test has been or not.”

“ I like the type of question, it's very intuitive and kids friendly. However, I think it could be difficult for them to understand it as they can't read. Adding a *sound button* to ask the question with an audio could be a great idea to solve this issue! ”
